Yes.

What is the success rate of RIDALCOL for people who have used it to leave off Alcohol use?

The Practitioners who have started using RIDALCOL and stopped Disulfiram they said that from the first bottle it self positive effect of no diarrhoea, Vomitting or skin rash and person reduces alcohol intake gradually. This is not possible with any other treatments.They have shared with us and morethan 70% of addicts it shows great success which is not seen in Disulfiram.

Every body knows that Disulfiram is the Molecule of choice to help addict to quit alcohol.

But there is RED signal to use Disulfiram because of its severe side effects such as Skin Rash, Flushing, Swollen, Severe Vomiting, Nausea. You will surprise to know the knowledge of many addicts that if they get skin rash or vomiting they know that something is given in their food which causes this effects and then they stop taking food at home because they simply don't want to quit alcohol.You will get detailed informations about side effects of Disulfiram.
